

# WARRNAMBOOL VETERINARY PIE NIGHT FERTILITY IN DAIRY COWS WEDNESDAY 19 AUGUST 2015 AT 7.30 PM

The culmination of a three year fertility focused research project conducted locally by Melbourne University resident and Warrnambool Veterinary staff member Dr Kelly Plozza.

**Do not miss this event** - Kelly's research is at the forefront in fertility management and is directly related to your farm's productivity and how you manage your herd's fertility.

*Rarely do you have the opportunity to hear first hand the outcomes and recommendations involved in research so fundamental to the day-to-day operations of your dairy.*

## PRESENTATION 1.

### What are the causes of poor fertility in local dairy herds?

A discussion on risk factors that effect a herds fertility.

- > Body condition at time of joining
- > Time calved
- > Age
- > Mastitis
- > Endometritis (dirty cows).

## PRESENTATION 2.

### Trial results using a novel method to treat non cycling cows.

Fixed-time insemination has been used to treat non-cycling cows, however there are limitations.

Is there a more effective approach to treating non-cycling cows and can we manage them more efficiently and economically?

**WARRNAMBOOL FOOTBALL CLUB – OVAL ROOM  
CRAMER ST WARRNAMBOOL AT 7.30 PM**

**Dinner provided – It's a Pie Night!**

**RSVP by Monday 17 August to the Large Animal Desk on 5561 7666**
